

Cloudpath® Enrollment System

Secure network access for BOYD, guest users and IT-owned devices

COMMSCOPE®
RUCKUS®

Cloudpath® Enrollment System is software/SaaS that delivers secure wired and wireless network access for BYOD, guest users and IT-owned devices. It streamlines getting devices on the network and secures every connection with powerful encryption. Cloudpath software gives you granular policy control over what network resources users can access. It lets you deliver a great end-user experience and virtually eliminates helpdesk tickets related to network access. Choose from cloud-based or virtualized on-premises deployment. Cloudpath software supports any user, any device and any network infrastructure.

Secure multivendor network access • Self-service onboarding and device enablement
Digital certificate management • Policy management • Third-party product integration via API

PROTECT YOUR NETWORK AND YOUR DATA WITH POWERFUL SECURITY FEATURES

Cloudpath software secures network connections with WPA2/WPA3-Enterprise—the highest standard for secure Wi-Fi. The system encrypts data in transit between the device and Wi-Fi access points for maximum security. It lets you define and manage policies for role based access—users only see the resources they should see. You gain visibility and control over what devices are on the network, and the power to revoke access at any time. A device posture check with remediation during onboarding ensures that only devices with appropriate security safeguards in place gain access.

GET BYOD USERS CONNECTED WITHOUT IT INTERVENTION

The sheer volume and diversity of devices that require network access can cause headaches for IT departments. What if BYOD users could self-provision their devices with intuitive self-service workflows? With the simple onboarding portal in Cloudpath software, they connect quickly and easily—without IT intervention. BYOD users initially gain access with existing login credentials. The system installs a digital certificate on the device so that users authenticate seamlessly from that point forward—without having to re-enter a Wi-Fi password.

Cloudpath Enrollment System

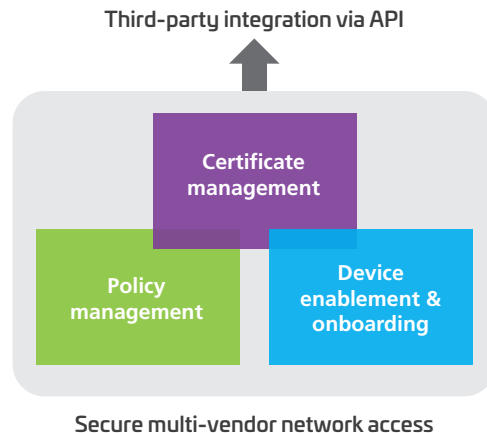

Secure network access for BOYD, guest users and IT-owned devices

GIVE VISITORS EASY, SELF-SERVICE GUEST WI-FI

No matter what the environment—offices, schools, colleges, hotels, public venues or anywhere, really—the first thing visitors ask is “How do I get on the Wi-Fi?” Cloudpath software delivers secure guest access for visitors without involving the IT helpdesk. Guest users simply self-register for internet access via an intuitive portal and receive login information via SMS, email or printed voucher. You can customize the login portal, guest workflows, terms and conditions, and more for a trouble-free and secure user experience.

BENEFITS

- Increases security for the network, devices, users and data
- Streamlines network onboarding for BYOD users, guests and IT-owned devices
- Gives you the power to define and manage policies for role-based access
- Delivers visibility and control over what devices are on the network
- Dramatically reduces helpdesk tickets related to network access
